

In order for the marking script to upload your submission, you need to have an authentication token. This token will provide access to your canvas account, and should be treated as a password. **Never** share your access token with someone else, and it's suggested that you only make this token available for a day, and generate a new one every time you submit an assignment.

1. Navigate to your profile settings on Canvas.
<https://birmingham.instructure.com/profile/settings>
2. Toward the bottom of the page click to generate a new access token.

Approved Integrations:

3. Give the token a name under the 'Purpose' entry box, and as mentioned above it's suggested that you set the expiration date to the following day for security reasons. Then generate the token.

A screenshot of the "New Access Token" dialog box in Canvas. The dialog has a title bar "New Access Token" with a close button. The main heading is "Generate an Access Token". Below it is explanatory text: "Access tokens are what allow third-party applications to access Canvas resources on your behalf. These tokens are normally created automatically for applications as needed, but if you're developing a new or limited project you can just generate the token from here." There are two input fields: "Purpose:" with the text "FoCS Assignment" and "Expires:" with the date "Oct 2, 2014" and a calendar icon. Below the "Expires:" field, it says "Thu Oct 2, 2014". At the bottom right are two buttons: "Cancel" and "Generate Token".

4. You will be faced with a page that has your full token. Take a note of it as you'll need it when running the testing script.
